## SUMMARY

I am a software engineer with more than 4 years of experience, majoring in E-commerce. I have been interested in building convenient applications, with good knowledge of distributed systems. Learning new technologies and business models is what I'm passionate about. I also have the curiosity about systems architecture, and my goal is to be a solution architect in the future.

## TECHNICAL SKILLS

---

- Programming Languages:
  - HTML5, CSS3
  - JavaScript, TypeScript, Golang, Python
- Framework/ Platforms:
  - Angular, React
  - NodeJS, NestJS, ExpressJS, Inversify
  - jQuery, Bootstrap4
  - Nginx, Ubuntu
  - GCP, AWS
- Others:
  - Good understanding of OOP methodologies, SOLID principles, Dependency Injection.
  - Experience in digital marketing (Facebook Ads, Google Adwords)
  - Basic skills of Photoshop and Lightroom
- Version Control:
  - Git (Github, GitLab)
- Database Management Systems:
  - MongoDB, Redis, DynamoDB
  - MySQL, PostgreSQL
- Soft Skills:
  - Teamwork
  - Time management
- Foreign Languages:
  - English:
    - IELTS: 6.0

## PROFESSIONAL EXPERIENCE

---

Kilo

07/2021 – 02/2023

**Position:** Full Stack Software Engineer

**Project:** Kilo APIs, Seller App, Retailer App, Shipping App, Third party portal

- **Project Description:** a B2B2C marketplace that streamlines the inventory ordering and fulfillment process for mom & pop retailers.
- **Team Size:** 11
- **Responsibilities:**
  - Build Kilo ecosystem application architecture based on microservices.
  - Design and implement modules (both back-end and front-end) on the seller app to help sellers sell those products on the KILO platform with multiple set-ups like seller onboarding flow, promotions, loyalty, dashboard, etc.
  - Retailer app helps Retailers/Stores search for products, make orders with a lot of payment methods, and KSR (Kilo Sale Representative) to assist ordering for retailers.
  - Shipper app and Third-party portal allow and helps logistic (3PL) partner handle and manage orders.
  - Develop CMS and back office modules to support admin to manage marketing modules (banners, promoted seller...) and payment flow (reconciliation, refund...) on the system.
  - Apply new technology to improve user experience and reduce management and operation costs...
- **Technologies:** Javascript, Typescript, Golang, Nodejs, Nestjs, Nextjs, ReactJS, Postgres, Redis, Docker, AWS.

## Be Group JSC

09/2020 – 05/2021

**Position:** Software Engineer

**Project:** [Cake \(Digital Banking\)](#)

- **Project Description:** Digital banking on Be application will help you minimize the difficulties or barriers in the process of money management and daily spending.

**Yomedia – New Pinetech**

**12/2019 – 06/2020**

**Position: Full Stack Software Engineer**

**Project:** DMP (Data Management Platform), SSP (Supply Side Platform)

- **Project Description:** Programmatic Advertising Ecosystem of the company. DMP platform for audience segmentation which helps target the right audience and develop potential customers. And SSP platform for selling advertising in an automated way via the company ads network and third-party ads exchange (OpenRTB)
- **Team size:** 7
- **Responsibilities:**
  - Develop APIs and implement modules for admin management system
  - Build functions for schedule workers
  - Communicate with team leader to get clear requirements
  - Develop APIs and implement modules for admin management system
  - Implement new modules for front-end
- **Technologies:** Nodejs, Inversify, PostgreSQL, Redis, RabbitMQ, Kafka, Druid, Hadoop, Redis

**Project:** SSP (Supply-Side Platform)

- **Project Description:**
- **Team size:** 7
- **Responsibilities:**
- **Technologies:** Nodejs, Inversify, MySQL, Redis, Kafka, Druid, Hadoop

**APPNET Media**

**05/2018 – 09/2019**

**Position: Full Stack Software Engineer**

**Project:** Hecta.vn

- **Project Description:** A property portal website providing information on and around real- state
- **Team size:** 4
- **Responsibilities:**
  - Communicate with customer to get clear requirements
  - Develop APIs and implement modules for admin management system
  - Build functions for schedule workers
- **Technologies:** Angular, Nodejs, ExpressJS, MongoDB

**Project:** Flowervietnam.vn

- **Project Description:** flowervietnam.vn, a B2B Ecommerce website aims to build a marketplace for flower shops and their customers
- **Team size:** 4
- **Responsibilities:**
  - Develop APIs based on Inversify and TypeScript
  - Study how notification architectures work and implement its features
  - Learn and integrate login by Google and Facebook features (both back-end and front-end)
- **Technologies:** Angular, Nodejs, Inversify, MongoDB

**Project:** Click.appnet.vn

- **Project Description:** A website provides solutions for Google Ads agencies to protect their client websites against clickers who are employ to click Ads on purpose in Google Search
- **Team size:** 4
- **Responsibilities:**
  - Design and implement features that support client-side
  - Develop and design related schema for a tracking system which tracked and stored all user behaviors information
  - Write key technical documents and mentor new members of my team
- **Technologies:** Angular, Nodejs, ExpressJS, MongoDB, RabbitMQ

## PERSONAL PROJECTS

---

**Project:** [the18chapter.com](http://the18chapter.com)

- **Project Description:** An E-commerce website reaching about 10k traffic/month sells colorful, fun boxers.
- **Accomplishments:**
  - Connected website with Facebook Pixels platform in order to analyse and follow the data that user accessed website
  - Learned how a website is created from scratch
